Outcomes After Critical Illness and Surgery

Outcomes After Critical Illness and Surgery (OACIS) is a multidisciplinary clinical and research group focused on understanding and improving patient outcomes after critical illness and surgery.

OACIS activities include clinical quality improvement projects and research focused on longitudinal, long-term patient outcomes assessments, both locally and nationally, with evaluation of physical, cognitive, and mental health outcomes.

- Areas of expertise for include:
 - design issues for:
 - multidisciplinary intensive care unit (ICU) quality improvement projects
 - longitudinal patient outcomes research
 - validated clinical and survey-based measures for patient outcomes research
 - methods for maximizing participant retention in longitudinal studies
 - statistical analysis of longitudinal observational data which considers:
 - time-varying confounders
 - repeated measures
 - competing risks/survival bias
